

RAW MATERIAL INFO

Kenney & Ross Fish Gelatin and Collagen is produced from the skins of wild, deep-sea, ocean fish such as cod, haddock and pollock. Wild fish have no possibility of being exposed to antibiotics or hormones as is possible with farm raised animals or fish. In addition, only the skins of kosher fish are used, so the Fish Gelatin and Collagen is able to meet the strict kosher standards of the Orthodox Union. Kenney & Ross Limited, is a facility dedicated to marine products. At this facility the skins from the wild, deep sea fish are collected from food fish processors in Canada, the U.S. and Europe to provide quality raw material. All raw Material Suppliers must be an approved processor and meet strict quality standards, such as water content, Kosher Species, and be held and stored in refrigerated environment.
