Fish processing plant Ostrovnoy, "DV Rybak", Shikotan Island

October 18, 2018

Fish processing plant Ostrovnoy, "DV Rybak", Shikotan Island

In April 2016, during a "direct line" with the president, the plant's employees said that they had not been paid their salaries for several months. At the request of the President of the Russian Federation, inspections of the OSTROVNOY fish processing plant were conducted, as a result of which the prosecutor's office opened criminal cases against the enterprise's management.

The Kuril Islands are of great geostrategic importance for the Russian Federation. In 2014, the UN Commission on the Continental Shelf recognized the Sea of Okhotsk as an internal sea of the Russian Federation.

The President instructed the Government of the Sakhalin Region and the Federal Agency for Fishery to provide assistance in finding and attracting investors to restore the life of the Ostrovnoy Fish Processing Plant.

And by the end of 2016, an investor was found and the situation was rectified. The investor was the Far Eastern Fisherman Management Company (AO UK DV Rybak). In early 2017, after almost a year of downtime, the first batch of canned fish from the "revived" Ostrovnoy Fish Factory reached the port of Vladivostok and was sent further to the regions of Russia.

From 2017 to August 2018, UK DV Rybak achieved:

1. The Ostrovnoy fish processing plant has concluded agreements with the Federal Agency for Fisheries for the use of aquatic biological resources and has already been re-assigned for the next 15-year period in the amount of 7 thousand tons (pollock, cod, halibut, navaga, scallop, shrimp, sea cucumber, flounder, squid and crabs).

2. Eight units of the fishing fleet were acquired and put into operation. Including small vessels for kelp and scallop fishing. Vessels armed with trawls and seine nets for catching bottom food fish. ... One vessel for catching and transporting live crab. As ... 2 ... r catching and transporting

live catches, armed with a purse seine. An auxiliary fleet was acquired and put into operation - a floating crane and two tugboats.

3. Expensive production equipment of the most advanced world standards was purchased. The tin can line was restored and launched. Canning production with a capacity of up to 250 thousand cans per day was restored, debugged and launched. A new plant for processing bottom-food and pelagic fish species with a production capacity of 250 tons per day of finished products was put into operation. The production of fish meal and fat with a capacity of 25 tons per day was put into operation. The construction of a new canning plant has been laid.

4. For the first time in the history of Shikotan, salmon fish species from the coast of Sakhalin are supplied for processing.

5. A private construction company, Kuril Islands LLC, was organized. Several dozen different types of construction special equipment were purchased and delivered to the island. About a hundred specialists with various construction qualifications were attracted.

6. The work of the social store has been streamlined - all socially significant goods are always on the shelves at significantly reduced prices. The assortment necessarily includes all the products manufactured by the Ostrovnoy Fish Factory. Also, with each return from fishing of a fishing vessel, part of the catch ends up on the counter in a chilled form.

7. Agreements have already been reached on upgrading the island's power supply. UK DV Rybak undertakes to launch a new powerful pelagic fish processing plant in 2021, which will increase the complex's total power consumption to 17 MW.

8. Since the beginning of 2018, the Ostrovnoy Fish Processing Plant has become a participant in the Kuril Islands priority development area.
