People are upset because fishmeal factory causes pollution

NGUYEN HUNG

Tuổi Trẻ trên Google News

TTO - Many people have complained that Phuc Ngoc Fishmeal Factory causes pollution, especially the bad smell that spreads into the surrounding environment, causing discomfort and affecting their lives.

People complain that Phuc Ngoc Fishmeal Factory (invested by Phuc Ngoc Ca Mau Company Limited, located in Hamlet 7, Rach Goc Town, Ngoc Hien District, Ca Mau Province) causes pollution.

Mr. Ly Hoang Tien - Chairman of Ngoc Hien District People's Committee - said that voters reported the pollution caused by Phuc Ngoc Fishmeal Factory to the Ca Mau Provincial People's Council.

In addition, at the recent District People's Council meeting, the issue of polluting fishmeal factories also "heated up" the hall. Recently, the Department of Natural Resources and Environment in conjunction with the People's Committee of Ngoc Hien District inspected the Phuc Ngoc Fishmeal Factory.

The inspection results found that some of the factory's equipment showed signs of deterioration and damage. The raw material receiving and processing area was not covered (photo), the conveyor belt was not cleaned regularly after importing raw materials, the finished product storage area was not covered, etc., causing odors to spread.

The authorities have requested Phuc Ngoc Ca Mau Company Limited to take remedial measures. Otherwise, they will be handled according to regulations.

People "hold their breath" because of the factory's wastewater discharge

Untreated wastewater from CP Vietnam Livestock Joint Stock Company is discharged directly into the environment, affecting hundreds of households - Photo: Q.NAM

For many months, hundreds of households in Trieu Lang commune, Trieu Phong district have had to "hold their breath" because of the foul smell released into the environment by CP Vietnam Livestock Joint Stock Company (Quang Tri branch).

The wastewater was discovered by local residents flowing from inside the company's fence to the outside through a ditch, then through many residential areas of Trieu Lang commune, then straight into the sea. The wastewater usually flows into the ditch from 9pm to 3am the next morning. There is a discharge every 3-5 days.

It is known that the above company has 29 shrimp ponds and 15 shrimp ponds. Mr. Tran Mai Son, Chairman of Trieu Lang Commune People's Committee, said that in early August, the local government coordinated with the environmental management agency of Quang Tri province to inspect this company.

The results showed that during the shrimp farming process, the company let untreated wastewater flow into the northern canal of the farming pond.

The inspection team requested CP Vietnam Livestock Joint Stock Company (Quang Tri branch) to stop discharging untreated wastewater into the environment. The company admitted to discharging wastewater in violation of regulations and pledged to correct the situation.
