Quang Nam: Pollution from rubber and fishmeal processing plants causes outrage

ĐẠI BIỂU NHÂN DÂN - 12/22/2022 | 11:42 PM

For many years, when two rubber latex and fishmeal factories in Dai Loc district, Quang Nam province came into operation, people here had to live with environmental pollution and fear of impending diseases.

Wastewater is directly discharged into the environment, white smoke columns spread everywhere... that is a daily image in the area of Da Nang Rubber Processing Company Limited and Dai Hoa Company Limited - Fishmeal Factory in My An Industrial Cluster (Dai Quang Commune, Dai Loc District, Quang Nam Province).

Wastewater from the rubber latex processing process has seriously polluted the environment around the area for a long time. Photo: Ha Nhi

According to direct records from the scene, by reporters of the People's Representative Newspaper, in mid-December 2022, at Da Nang Rubber Processing Company Limited, the company's premises contained a large amount of unprocessed rubber latex emitting a strong foul odor. During the production process, this company also discharged wastewater directly into the surrounding environment, this amount of wastewater stagnated and caused a foul odor. Following the "trace", reporters went to the processing plant of this Company and witnessed many sources of mixed, black wastewater flowing out from the factory, emitting a foul odor and spreading into the air.

Hanoi: Project with capital increase of hundreds of billions "shelved" for many years, people suffer from waste flooding during

Rubber gathered in the factory gives off a strong stench. Photo: Ha Nhi

The foul smell and untreated wastewater discharged directly into the environment around the rubber processing factory have been going on for a long time. The opinions of local people and voters have been sent to local authorities many times. However, it is not clear why this violation has not stopped, but has become more serious than before, making people extremely upset. People are hopeless when their petitions are not thoroughly resolved by authorities at all levels.

If the environment of Dai Hoa Company's fishmeal processing factory is not improved, it will greatly affect the health of the people and workers directly involved in the production. Photo: Ha Nhi

Continuing to go deeper, a few hundred meters from Da Nang Rubber Processing Company Limited is Dai Hoa Company Limited - a fishmeal factory in My An Industrial Cluster, Dai Quang Commune, Dai Loc District, Quang Nam Province. The reporter continued to record that this factory caused environmental pollution, with a stench no less than that of rubber latex.

Standing next to their agricultural land, some residents here said indignantly: Every time it rains or is hot, people cannot stand the stench coming from the factories. We have complained many times to the commune, district, and province, but nothing has happened (?).

The chimney carries the untreated stench from the cooking of fish meal of Dai Hoa Company into the air, causing public outrage. Photo: Ha Nhi

Not only the two factories mentioned above, in this area there are also other factories that are "combining" to discharge dirty waste, violating the law, causing serious environmental pollution. People here are extremely worried about their health and that of their children and grandchildren who will suffer from diseases caused by polluted water and air containing deadly impurities if the above situation is not improved.
