hundreds of Chinese fishing boats off its coast By Avery Schmitz, Isaac Yee, Yong Xiong and Betiana Fernández Martino, CNN ② 8 min read · Updated 2:31 AM EDT, Mon March 10, 2025

Fishing vessels off the coast of Argentina, as seen on February 20. Argentine Defense Ministry **Buenos Aires (CNN)** — The P-3 propellor plane banks sharply, silhouetted against dozens of shimmering lights in the sea against an Argentine sunset. As the camera pans across the scene, it becomes clear: the glaring lights come from dozens of fishing vessels dotting the ocean below. The footage, shared by the Argentine military in late February, shows the overwhelming scale of a flotilla near a marine boundary which separates the country's more restrictive exclusive economic zone from less-regulated international waters.

Argentine Navy. Most of these ships hunt for squid, which are abundant along the Argentine coast and a vital food source in the marine ecosystem.

This area, about 200 nautical miles off the coast of southern Argentina, is notorious for

illegal and unregulated fishing — often carried out by Chinese vessels, according to the

The Argentine military is now ramping up efforts to combat these fishing operations in a region experts warn is on the brink of environmental collapse.

CNN's analysis found nearly 200 Chinese fishing boats floating off Argentina's coast. 01:17 The military's footage shows an advanced P-3C "Orion" surveillance plane — designed for

anti-submarine and maritime surveillance — approaching the fishing fleet. The aircraft took part in the Argentine military operation in January alongside a smaller C-12 surveillance plane and two corvette warships, according to the Argentine navy. This surveillance mission was conducted to address ongoing concerns that the fishing vessels may cross into the country's more restricted EEZ, according to a spokesperson for Defense Minister Luis Petri.

which sailed from Asia to richer waters, the military says.

of all Argentines are at stake." A 'floating city' off Argentina's coast By analyzing open-source data from watchdog non-profit Global Fishing Watch days after the Argentine military posted video of the surveillance mission, CNN identified 198 named fishing vessels in the area in late February. More than 80% of the 198 vessels identified by CNN were sailing under the Chinese flag.

Nearly 10% of the vessels were Spanish, and a further 5.5% were registered in either the

concerns over illicit fishing. At night, many of these fishing vessels turn on bright lights to

lure squid to the surface, where they are harvested using a large net. The lights are so strong that they can be seen from space.

The cluster of ships, stretching approximately 150 miles from north to south, raised

United Kingdom or Malvinas/Falkland Islands, according to CNN's analysis.

Further CNN analysis revealed that the Chinese fishing vessels identified were far more likely to have their location beacons — known as an Automatic Identification System (AIS) — turned off. When ships disable these systems, they disappear from publicly available ship tracking platforms.

Of approximately 500 instances when these fishing vessels had their tracking systems

turned off over the past year, CNN found that over 92% involved Chinese-flagged ships.

FALKLAND ISLANDS 200 miles 200 km Sources: CNN analysis of data from Global Fishing Watch and MarineTraffic; Flanders Marine Institute (2023) Maritime Boundaries Geodatabase: Maritime Boundaries and Exclusive Economic Zones Graphic: Renée Rigdon, CNN Seven of the identified vessels — all sailing under China's flag — were operating under US sanctions, according to a Treasury Department database. These ships are linked to Fujian Provincial Pingtan County Ocean Fishing Group Co., Ltd., a Chinese fishing company which was sanctioned by the US in 2022 for its involvement in "serious human rights abuses" and illegal fishing, including operations in the protected waters of the Galapagos Islands and the transport of more than 6,600 shark carcasses, according to a US Treasury Department press release. The company also received a \$19 million subsidy from China's government as an incentive to develop its deep-water fishing capabilities, according to the statement. The US Treasury Department press release detailed reports of forced labor, physical abuse, and extreme isolation among crew members. In one case, a Pingtan crew member who tried to leave a vessel after learning of unpaid wages was allegedly denied permission and deprived of food for three days, according to the statement. China's Ministry of Foreign Affairs said in a statement to CNN that China is a "responsible" fishing country" that "strictly abides by fishing rules on the high seas and in the exclusive economic zones of coastal countries," and has "zero tolerance for illegal fishing and insists

It added that China has "actively participated in the formulation of international rules

related to fishery subsidies" and has made "contributions to the conservation and

sustainable use of fishery resources and the maintenance of a fair and reasonable

waters" in a letter responding to the Treasury Department's 2022 sanctions.

CNN has reached out to Pingtan for additional comments.

Illicit fishing has plagued costal Argentina for decades, experts say, with the Argentine

Navy saying that Chinese vessels are frequent violators of the exclusive economic zone.

Squid, a primary target of fishing vessels in the region, plays an important role in the food

chain in Argentine waters, illicit fishing expert and conservationist Milko Schvartzman told

undermine efforts "to manage fisheries sustainably (and) conserve marine biodiversity." In

According to the United Nations, illegal, unreported, and unregulated fishing can

Argentine authorities say China's distant-water fishing fleet routinely travels thousands of miles in search of commercially valuable fish species. Meanwhile, the total number of fishing vessels at the border of international waters and the EEZ, known as "milla 200," has increased by nearly a third since 2010, from 400 vessels to about 550, Schvartzman told CNN.

Video reporting by Mackenzie Happe and Avery Schmitz.

When these vessels operate so close to the EEZ, they endanger the livelihoods of thousands of Argentine fishermen and threaten the marine environment, Sócrate told CNN. "You don't have any place in the world where in a short strip of ocean, you have more than 550 vessels fishing without any regulation," Schvartzman said. "And the environmental impact is because (of) this."

This imbalance harms Argentine fishermen, Sócrate says. He estimates that local

fishermen only catch half of what they could have because of the foreign fishing activities.

some cases, it can lead to the "collapse" of local fisheries, according to the UN. A wider issue The problems faced in Argentina are part of a wider pattern of unregulated fishing conducted by Chinese fishing fleets across the globe. Having depleted its own domestic fishing resources, similar Chinese flotillas have been spotted off the coast of Western Africa, in parts of the disputed South China Sea and around South America.

CNN. "Any impact (on) squid has an impact on the whole ecosystem."

"(Only) when you get closer, you find that each light is... a vessel with hundreds of very powerful lights used to fish squid," Schvartzman says.

Even when fishing vessels stay outside Argentina's exclusive economic zone, overfishing and other harmful practices can damage the marine ecosystem, Schvartzman explains. "A fish doesn't understand (these) imaginary borders we invented," he told CNN. "For the species, for the ecosystem, it doesn't matter if the vessel is one mile farther or closer... the impact is the same." CNN's Nectar Gan and Natalia Valle contributed reporting. Search CNN...
